

Flour & Eggs: A Baking Adventure

Roots & Shoots: Stage 1

From Soil
to Soul

Welcome to the Kitchen!

Hello, my little growers!
Come closer... can you
smell that? That's fresh
bread made from flour I
milled myself this
morning!!

The closer our food is to
nature, the stronger it
makes our bodies.

When we Eat better,
we will Feel better.

The Secret Life of Grains

Grains are seeds — and seeds are sleeping baby plants full of power!

40+ Nutrients:
Fibres, vitamins,
minerals, and
carbs working
together.

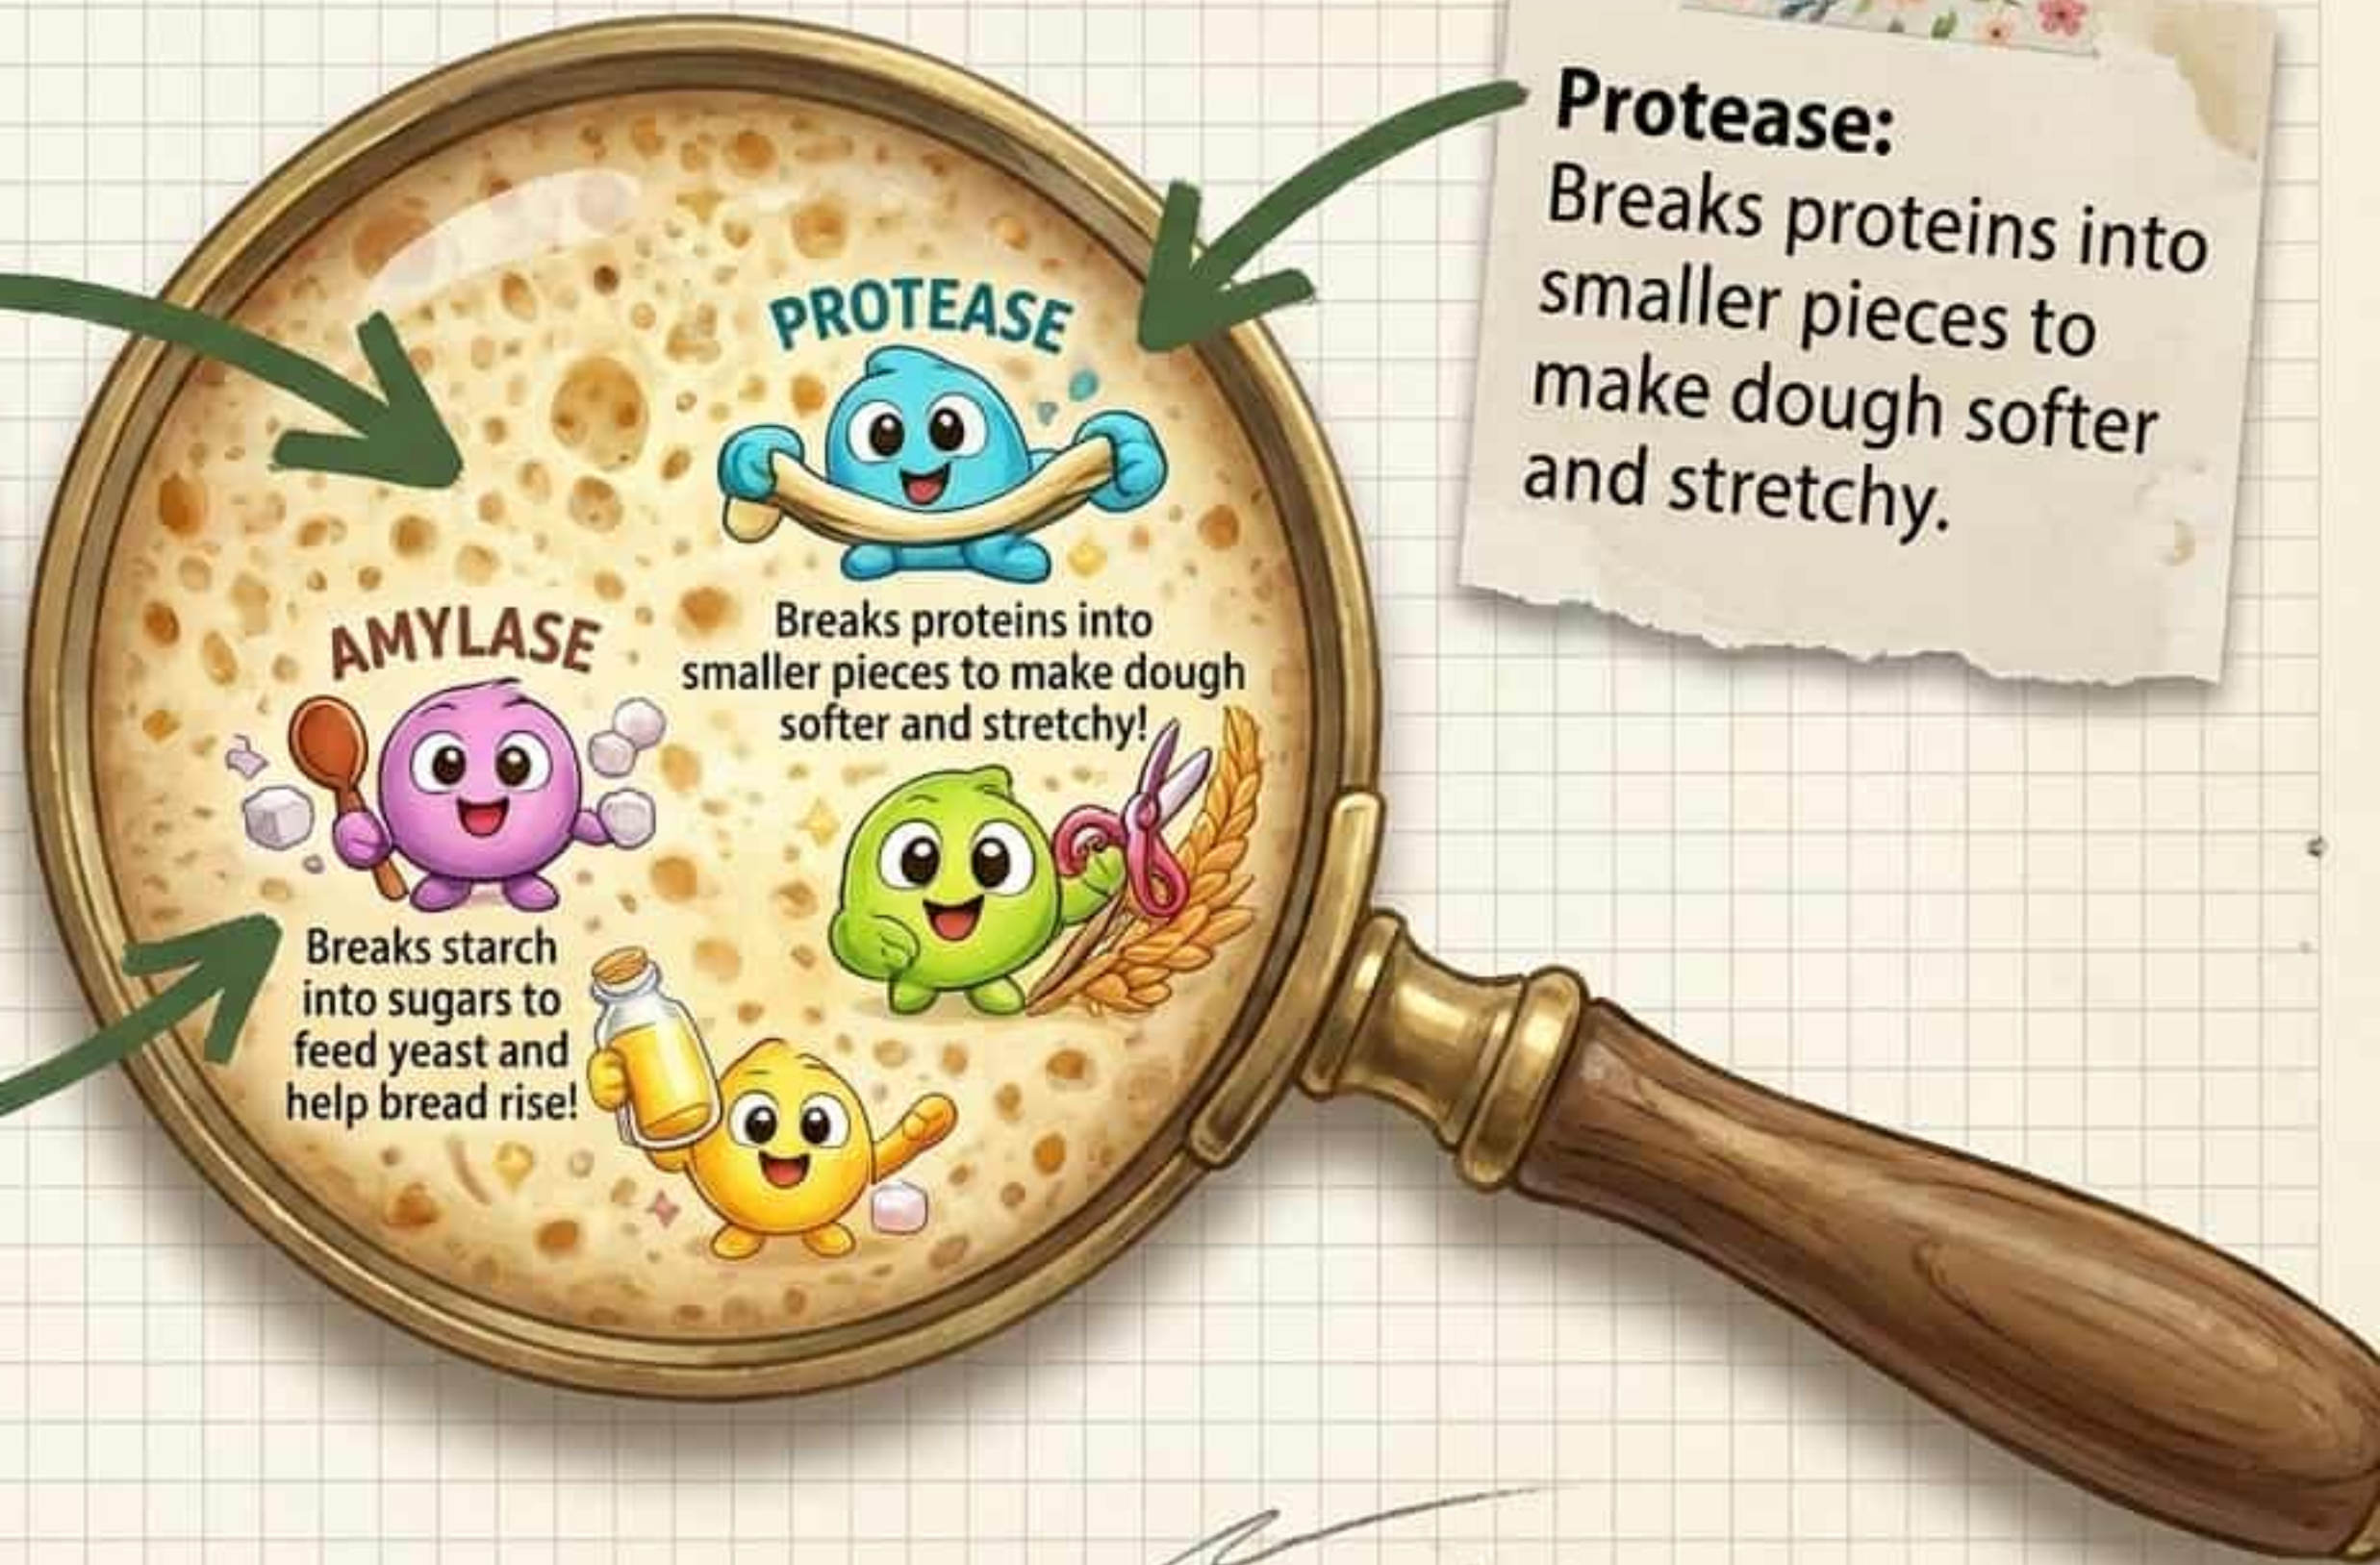

B-Vitamins:
Help your brain
think and
your body
move!

Inside the Seed

The Germ: The tiny living part inside a grain — the baby plant that can grow into a NEW CROP!

Amylase:
Breaks starch into sugars to feed yeast and help bread rise.

Protease:
Breaks proteins into smaller pieces to make dough softer and stretchy.

The Freshness Rule

Fresh is Best

Flour stays **FRESH** for only **3 DAYS** after being milled. It keeps the living Germ, packing your bread with Iron and Magnesium for growing bones!

Store-Bought

Removed
Germ

Shops remove the Good Germ to make flour last longer, because the natural oils can go rancid on the shelf. ☹️

THE LONGER THE SHELF LIFE, THE SHORTER YOUR LIFE.

The Grain Gang

Every grain has its very own baking magic!

Wheat: The Strong Muscle

Oats: The Playful Energy

Barley: The Proud Protector

Millet: The Energetic Jumper

Meet the Kitchen Helpers

Yeast is a tiny helper that eats sugar and makes bubbles to make bread grow.

Gluten makes bread stretchy, fluffy, and strong!

Remember: While gluten is great for bread, some people's tummies feel sick when they eat it.

The Bread Magic Timeline

Mix:

Wake up yeast with warm water. Add to flour and a pinch of salt to make a sticky dough.

Knead:

Press, fold, and turn — **AGAIN & AGAIN** — until lovingly smooth and stretchy.

Rest:

Give the dough Time to Rise in a warm spot.

Fire:

Bake into beautiful flatbread.

Patience is a Virtue that makes your bread well worth the wait.

Suelo Super Sprouts

Warm water gives sleeping seeds a wake-up call. When they start to grow, we call it sprouting!

- ☒ Packed with living enzymes to supercharge your tummy.
- ☒ Can be eaten as a super snack.
- ☒ Planted in soil to become seedlings.
- ☒ Fed to chickens for excellent eggs!

The Feathered Garden Helpers

"Chickens are like little feathered garden helpers! If we care for them well, they give us fresh eggs and help our soil stay healthy."

Chicken Needs:

- ✓ A safe home called a COOP.
- ✓ Space to walk, scratch, and explore.
- ✓ A diet of sprouted grains, seeds, bugs, and kitchen scraps!

Excellent Eggs

Vitamins B & D
(For extra strong bones)

Power
combo!

Protein
(For growing muscles)

Build it up!

Iron & Zinc
(To keep your
BLOOD healthy)

Vital
flow!

Pasture-raised Eggs
are brighter, tastier,
and have FAR more
nutrients than
store-bought ones.

© An egg a day keeps the doctor away! ♥

Preserving the Harvest

*The Glossy Finish:
Rubbed in grease or butter
for a glossy finish and a
longer shelf life.*

*Water Glassing:
Preserved long-term in jars
of water and pickling lime.*

*Inside this little shell is a bundle of powerful nutrients—
preserving them right keeps the power locked in!*

Kitchen Creations

Scrambled Eggs — Quick, easy, and perfect for busy mornings.

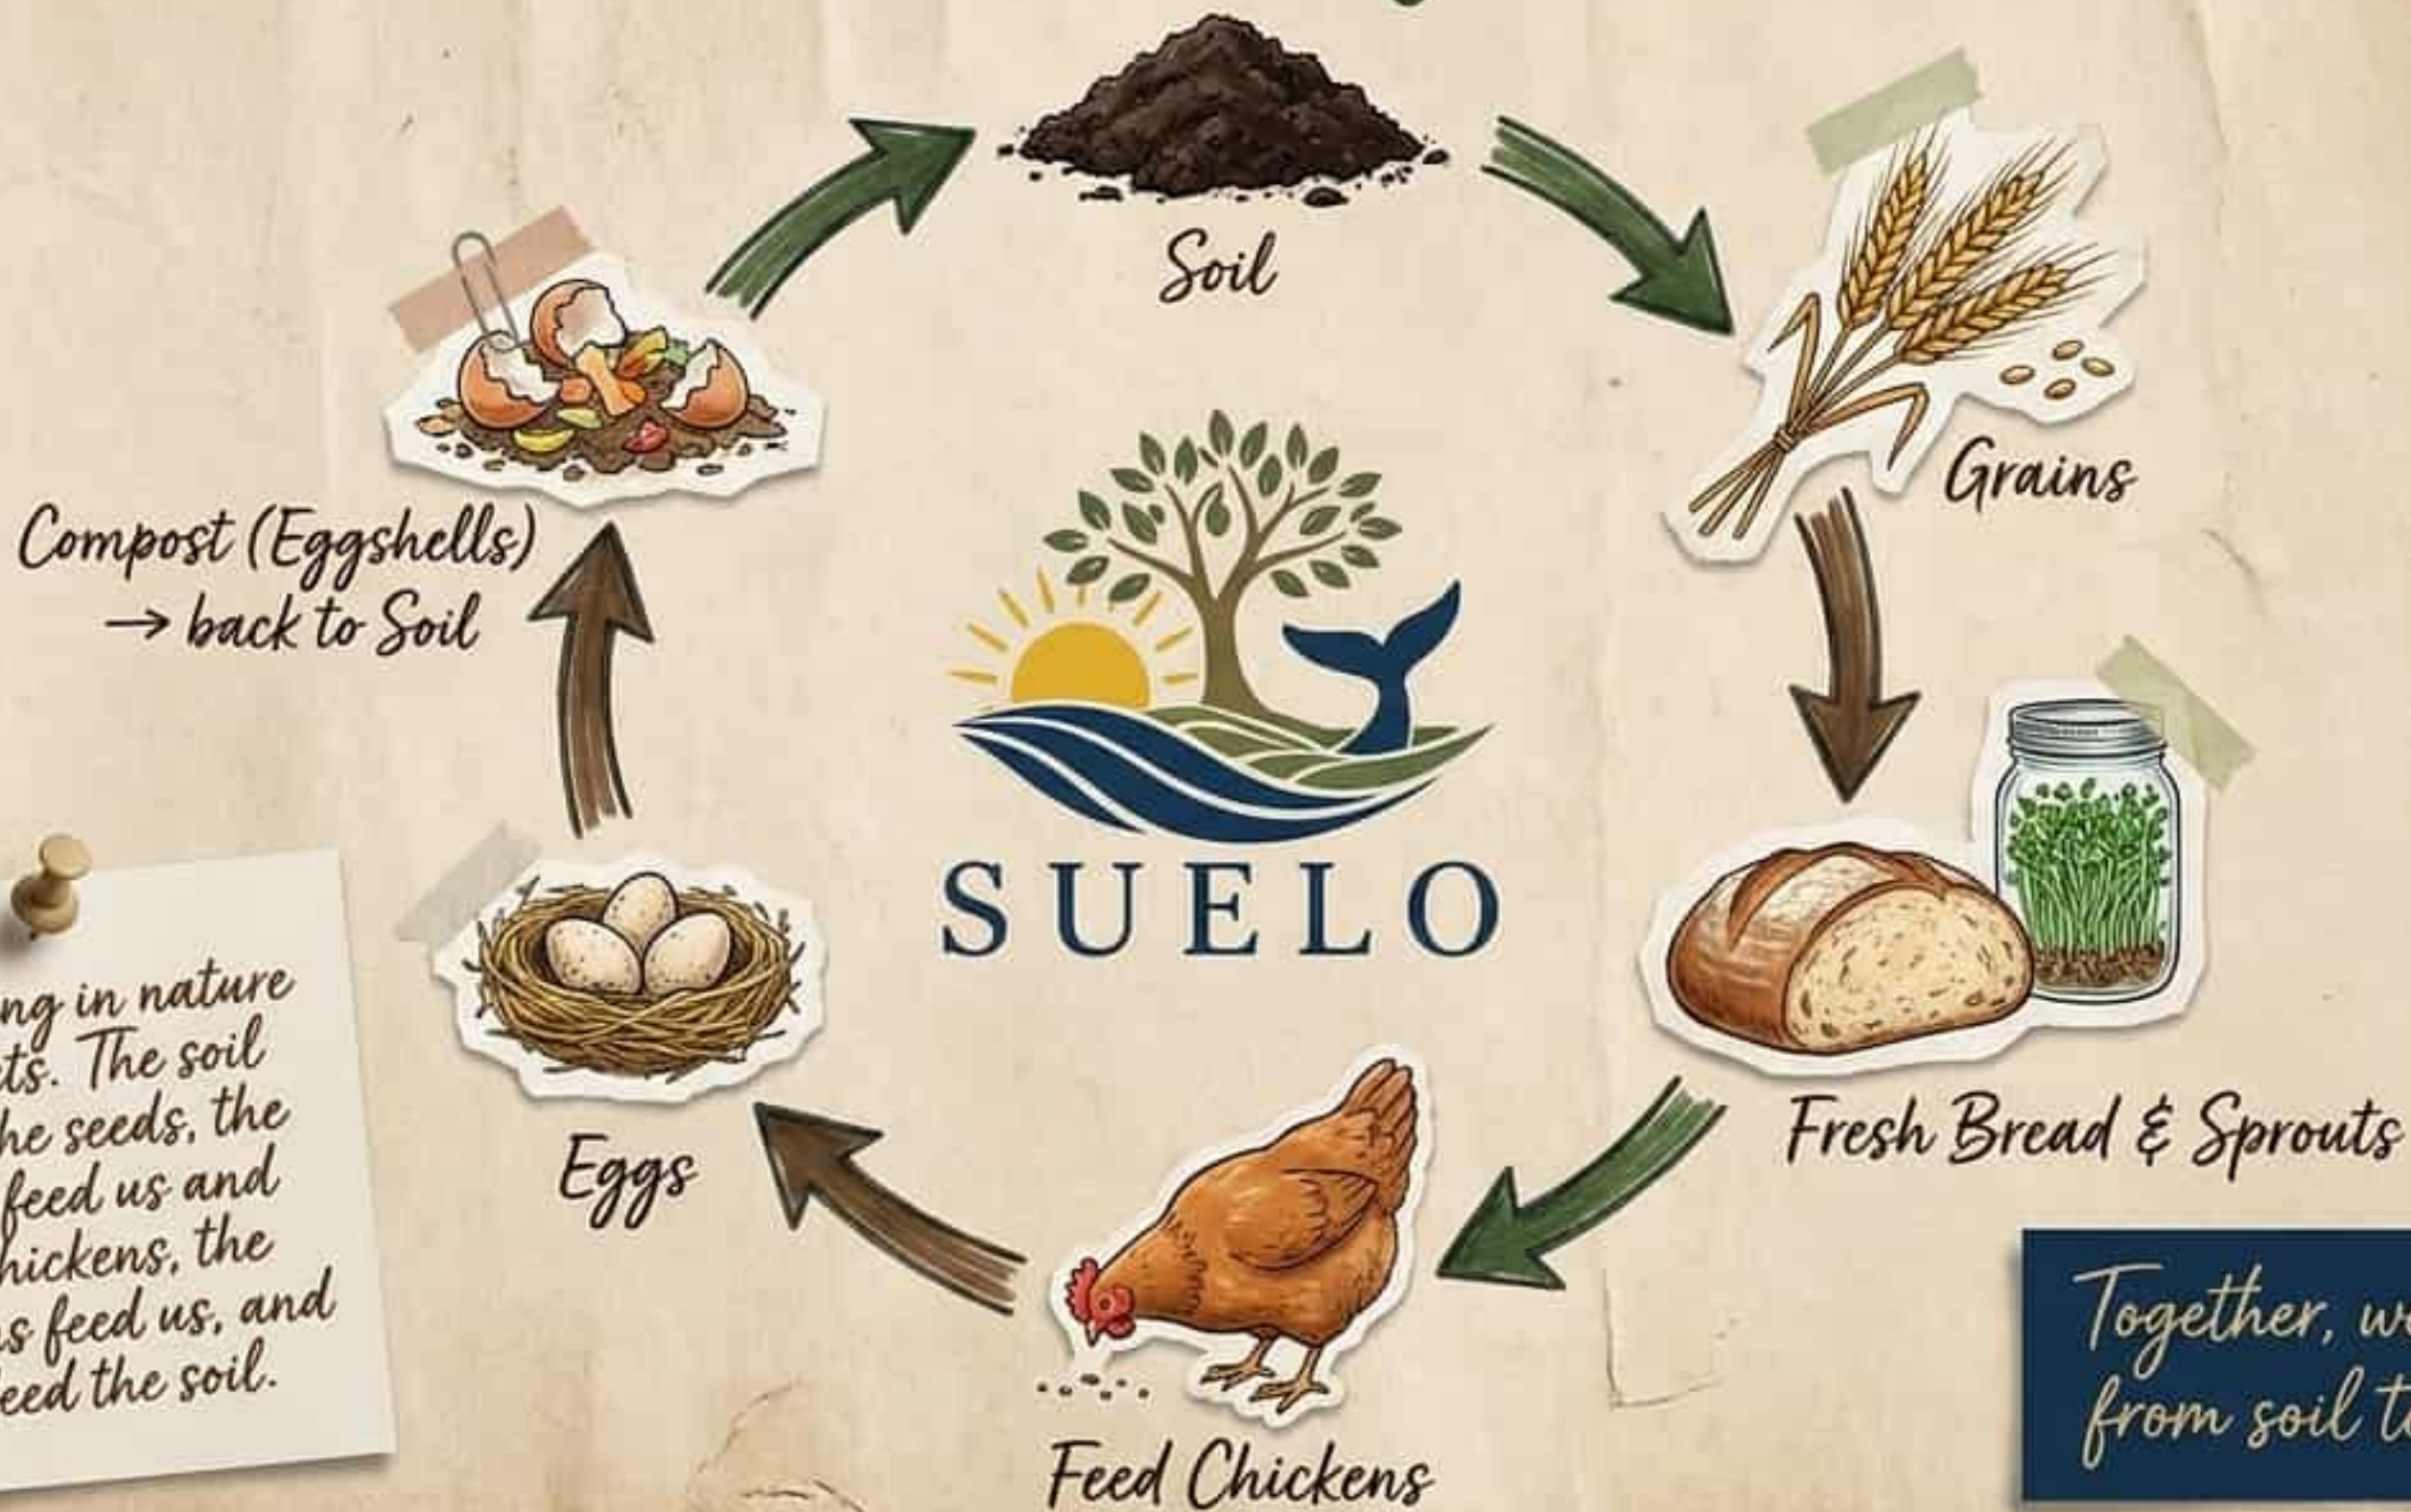

Rainbow Mayonnaise — Science magic! Slowly whisk EGG YOLK while adding OIL drop by drop. With enough patience, you get creamy mayonnaise.

Pro Tip

Keep your EGGSHELLS! Give them back to your soil for a calcium boost and to prevent pesky problems.

The Circle of Suelo

Everything in nature connects. The soil feeds the seeds, the seeds feed us and the chickens, the chickens feed us, and we feed the soil.

Together, we grow.
from soil to soul.
